and Emergency Response

# Energy Emergencies 101

Megan Levy, Project Manager, State, Local, Tribal, and Territorial Program

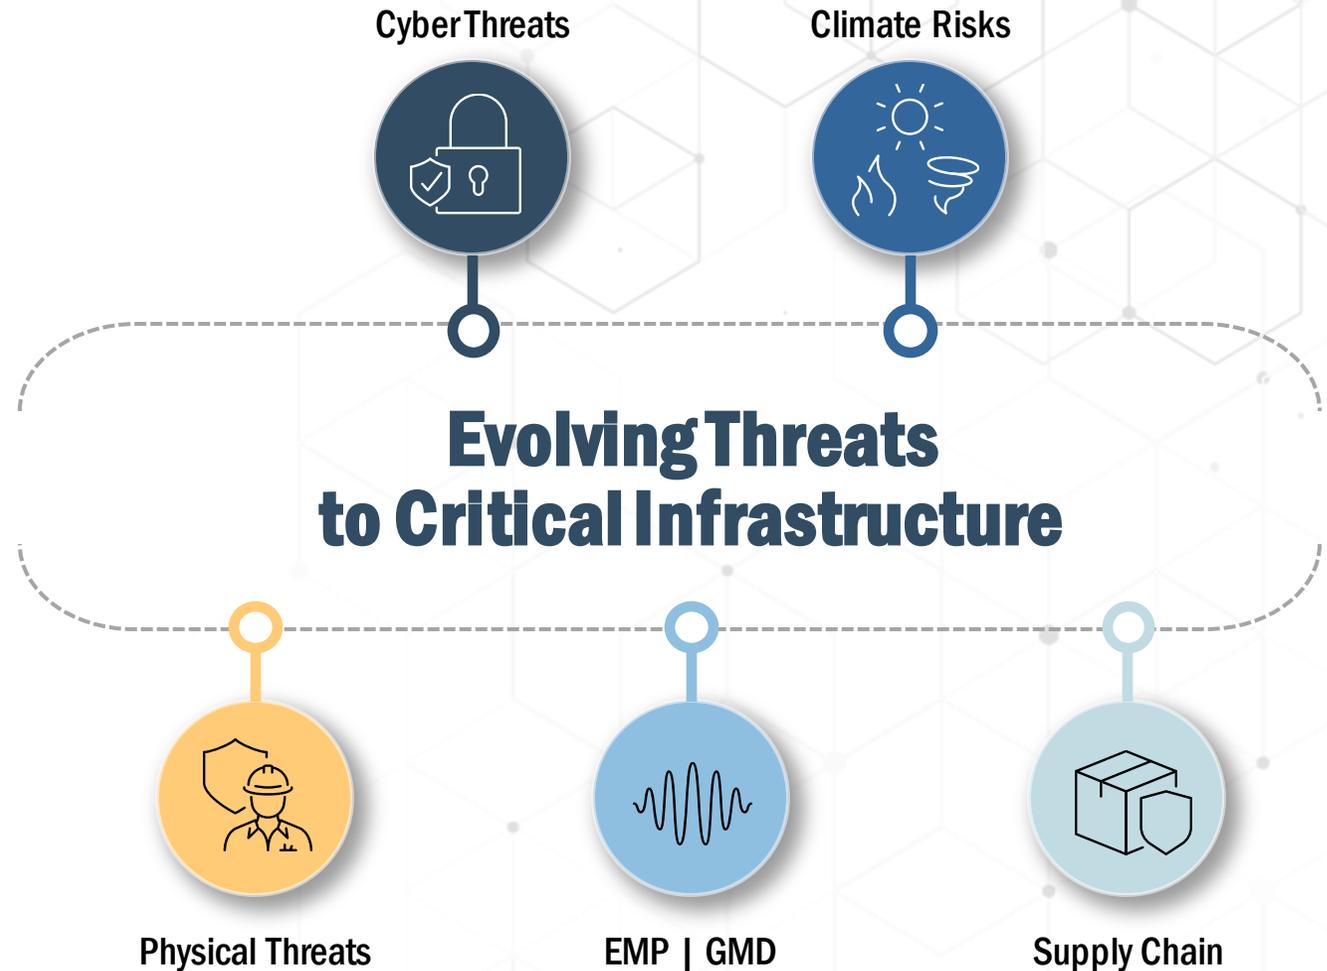

Kevin DeCorla-Souza, Senior Director, Energy Markets, ICF

April 5, 2023

# CESER Mission & Energy Threat Landscape

To enhance the security of U.S. critical energy infrastructure from all hazards, mitigate the impacts of disruptive events and risk to the sector overall through preparedness and innovation, and respond to and facilitate recovery from energy disruptions in collaboration with other Federal agencies, the private sector, and State, local, tribal, and territory governments.

# Collaboration and Coordination is Essential

State, Local, Tribal, and Territorial (SLTT) Governments

Energy Government Coordinating Council (EGCC)

## Appendix A: Situational Awareness Tools

The following table represents situational awareness tools that state, local, tribal, and territorial (SLTT) officials or state ESF-12 responders should be using to gather information on an ongoing basis and especially during emergencies. States should customize this section to add state-specific tools, and the frequency will depend on the situation and how often each data source is updated.

<a href="#">EIA Hourly Electric Grid Monitor</a>	<p>The Grid Monitor displays hourly data on the U.S. electricity grid by balancing authority, including hourly electricity generation by energy source, interchanges, and day-ahead demand forecasts. The grid monitor allows users to generate custom dashboards they can save and share. Yesterday's net generation by energy source and tomorrow's demand forecasts are available by 10:00 a.m. ET each day.</p> <p>During extreme temperature events, an SLTT official can check their balancing authority to see how high demand is forecasted to be for the next day in comparison with historic demand, generation, and interchange to anticipate if there may be a risk for an electricity shortfall. The Grid Monitor could also be used to check a balancing authority for increased gas-to-oil switching by checking the level of petroleum generation over the past week on the "Electricity generation by energy source graph."</p>	
<b>RTO/ISO Website</b>	<p>Some states' electric grid is operated by an RTO or ISO. Every RTO/ISO has a website with information about the status of their grid and current generation and electricity demand, interchange with other grids, forecasts for the coming days, and more. These sites will also post any of the three Energy Emergency Alert (EEA) levels if the balancing authority experiences conditions requiring emergency operations.</p> <p>Users in Texas, for example, can monitor the ERCOT website dashboard to see whether they are operating under normal conditions or have an emergency alert in place. ERCOT displays the current level of operating reserves and depicts available supply versus predicted demand. The supply and demand graphic can be used to assess the probability of risk to grid operations for the day.</p>	

# State Emergency Preparedness Checklist

## ✓ Monitoring Functions

- Assign lead(s) to monitor situational awareness tools including I-SACs
- Regularly coordinate with private sector
- Define process / triggers of when threats or alerts need to be escalated
- Practice information sharing in exercises

## ✓ Emergency Response Logistics

- Create EAGLE-I Account: <https://eagle-i.doe.gov/login/accountRequest>
- Check EEAC contacts in ISERNET: <https://www.oe.netl.doe.gov/ISERNET/login.aspx>
- Know your DOE ESF-12 Regional Coordinator: Email [energyresponsecenter@hq.doe.gov](mailto:energyresponsecenter@hq.doe.gov) for contact information.
- Bookmark Energy Waivers Library & Emergency Response Hub

Energy Waivers Library

# Energy Emergency Assurance Coordinators (EEACs)

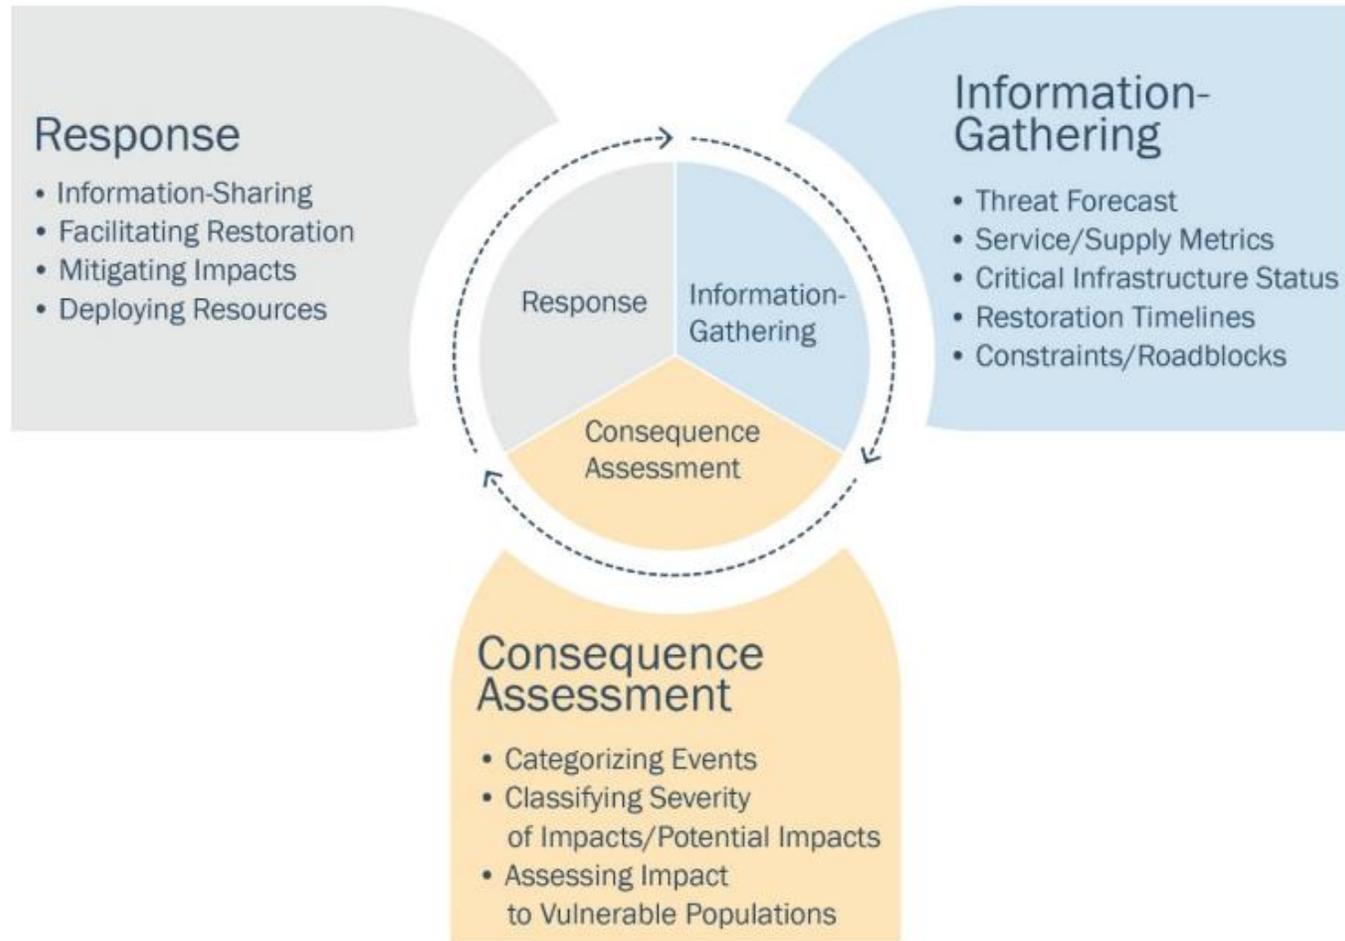

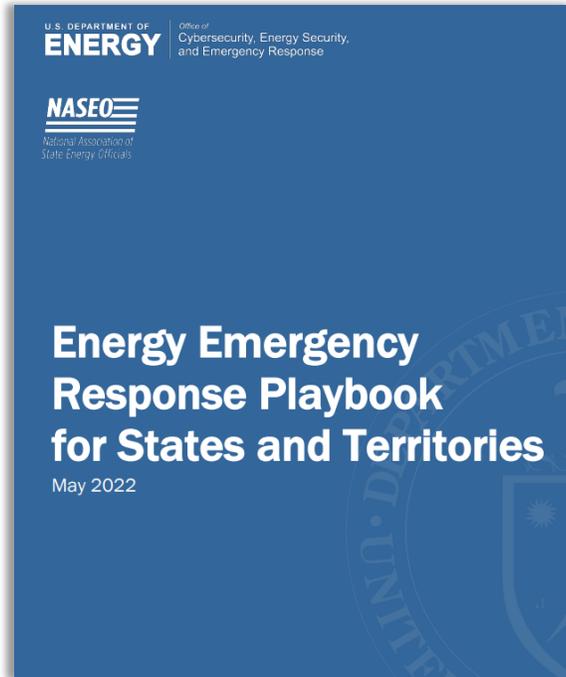

- The EEAC Program is a cooperative effort between CESER, NASEO, NARUC, NGA and NEMA to enable information sharing leading up to and during an energy disruption or emergency
- Goal is to improve information-sharing and communication and lower response times.
- States designate primary and secondary contacts
- Provides credible, accurate, and timely source of information and updates on actions taken.
- CESER's SLTT Program sends states a monthly brief with analysis of past disruptions via the EEAC listserv

**SITUATIONAL AWARENESS TOOLS**

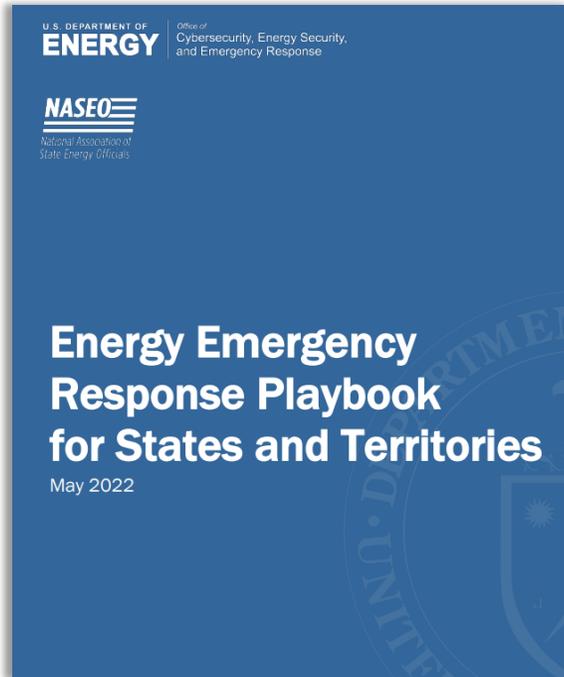

Key: Data type

					
Geospatial	Inventory	Production/Generation	Transport/Transmission/Distribution	Consumer Outages	Pricing

Tool	Power	Liquid Fuels	Natural Gas
<b>U.S. Department of Energy (DOE) Tools</b>			
<a href="#">DOE Emergency Situation Reports</a> 	Customer outages and summaries of electric system damage and estimate restoration timelines. Level of resources committed for restoration	Refinery status, capacity, and output, petroleum terminal status, regional product inventories, offshore crude oil production impacts	Natural gas pipeline status, gas utility customer outages, onshore and offshore natural gas production impacts
<a href="#">DOE EAGLE-I</a> 	Power outages by utility and by county in near real time	Refinery process unit status alerts	Natural gas pipelines critical notices
<a href="#">DOE Estimated Customer Power Outages</a>	Predicted customer outages based on strength and track of hurricane or major storms	Can be used to identify the critical petroleum infrastructure that may be impacted by the storm or by power outages	Predict the degree that electrically powered compressors, if used, may be affected

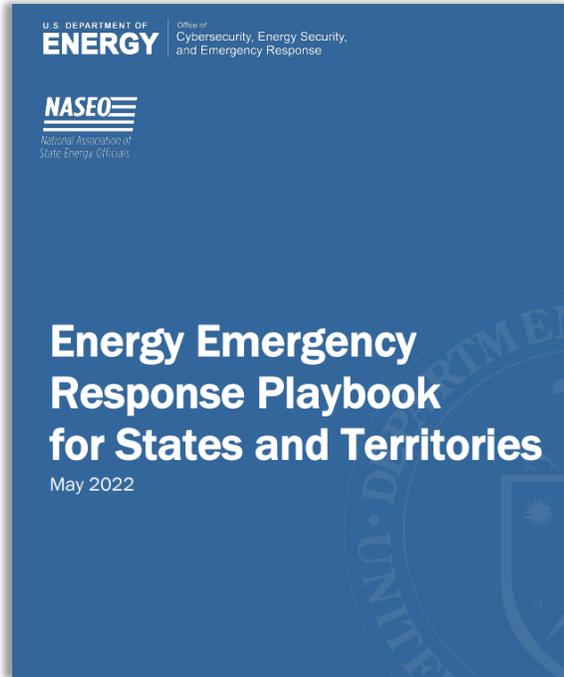

# Customizable Energy Emergency Response Playbook

**POWER OUTAGE/ELECTRICITY SHORTAGE EVENT** Electricity emergencies generally fall into two categories: (1) service disruptions caused by damage to the transmission and distribution (T&D) grid (e.g., from adverse weather events), or (2) electricity supply shortages due to generation or transmission outages during periods of high demand, which can result in rolling blackouts or grid collapse if not properly managed. Electric utilities are generally well-equipped to deal with common T&D-level outages through internal resources and mutual-aid agreements with other utilities.

Tier	Consequences Indicators	Examples
<b>Tier 3: Enhanced Watch</b>	<ul style="list-style-type: none"> <li><b>Service Disruption:</b> Localized power outages with short (less than 48 hours) restoration timelines</li> <li>Restoration work largely involves repairing fallen or damaged distribution lines and poles.</li> <li>Lifeline sectors largely maintained with backup generators.</li> </ul>	<ul style="list-style-type: none"> <li>Common thunderstorms</li> <li>Common winter and ice storms</li> <li>Public Safety Power Shutoffs (PSPS) to prevent wildfires</li> <li>Heat waves or cold snaps that drive high electricity demands</li> </ul>
<b>Tier 2: Significant Event</b>	<ul style="list-style-type: none"> <li><b>Service Disruption:</b> Widespread power outages with longer (more than 48 hours) restoration timelines.</li> <li>Restoration work involves repairing damaged utility wires and structures across T&amp;D systems.</li> <li>Lifeline sectors experience temporary or intermittent disruptions as backup generator fuel is exhausted and awaits replenishment.</li> <li>Vulnerable groups that rely on electricity moved to shelters or provided backup generators as needed.</li> </ul>	<ul style="list-style-type: none"> <li>Hurricane Dorian (2019)</li> <li>Puerto Rico Magnitude 6.4 earthquake (2020)</li> <li>Dixie Fire in California (2021)</li> <li>California drought and hydroelectric shortfall (2021)</li> </ul>
<b>Tier 1: Major Event</b>	<ul style="list-style-type: none"> <li><b>Service Disruption:</b> Widespread power outages with extended or indefinite restoration timelines (a week or longer).</li> <li>Extensive damage to T&amp;D systems, including damage to substations and other system components that require longer repairs.</li> <li>Lifeline sectors, including Emergency Response, experience severe impacts from difficulty refueling vehicles and backup generators due to impact of power outages on liquid fuels supply chains.</li> </ul>	<ul style="list-style-type: none"> <li>Hurricane Sandy (2012)</li> <li>Hurricane Maria (2017)</li> <li>Hurricane Laura (2020)</li> <li>Hurricane Ida (2021)</li> <li>Texas extreme cold weather event (2021)</li> </ul>

# Customizable Energy Emergency Response Playbook

U.S. DEPARTMENT OF ENERGY   Office of Cybersecurity, Energy Security, and Emergency Response		Power Outages/Electricity Shortages
ESF-12: STATE ENERGY OFFICE, PUBLIC UTILITIES COMMISSION		
	Pre-Event	Response
<b>Tier 3: Enhanced Watch</b>	<ul style="list-style-type: none"> <li><b>Situational Awareness and Information-Sharing:</b> Monitor threat forecasts and predictive outage modeling</li> <li><b>Situational Awareness and Information-Sharing:</b> Identify risk factors that could exacerbate or prolong energy impacts or cause impacts to cascade into other sectors</li> <li><b>Situational Awareness and Information-Sharing:</b> Report outages or other operational issues to DOE as required</li> <li><b>Situational Awareness and Information-Sharing:</b> Understand current demand for electricity within the state, including use by critical users, and how demand may change during event</li> <li>_____</li> <li>_____</li> </ul>	<ul style="list-style-type: none"> <li><b>Situational Awareness and Information-Sharing:</b> Leverage monitoring tools and stakeholder contacts to gather information on outage impacts and duration</li> <li><b>Situational Awareness and Information-Sharing:</b> Identify cascading impacts or interdependencies, including potential impacts to petroleum and natural gas systems</li> <li><b>Situational Awareness and Information-Sharing:</b> For cyber events<sup>1</sup>, engage with the MS-ISAC to receive information about the incident and any additional cyber threats</li> <li><b>Situational Awareness and Information-Sharing:</b> For cyber events, coordinate with state Chief Information Officer or other state cyber office on messaging, response, and whether there are any threats to state systems</li> <li><b>Resource Management:</b> Assess staffing capabilities and resource adequacy of state to respond to the event</li> <li>_____</li> </ul>
<b>Tier 2: Significant Event</b>	<ul style="list-style-type: none"> <li><b>Situational Awareness and Information-Sharing:</b> Participate in internal and external situational awareness activities (e.g., regional calls, federal calls, briefing state leadership, etc.)</li> <li><b>Situational Awareness and Information-Sharing:</b> Communicate information on predicted power outages to state ESF-12 stakeholders</li> <li><b>Resource Management:</b> Coordinate with emergency managers to inventory available state resources (e.g., generators, etc.) and identify any resource shortages or limitations that could affect event response</li> <li><b>Situational Awareness and Information-Sharing:</b> For pre-event evacuations, monitor the status of electric vehicle charging station status along evacuation routes</li> </ul>	<ul style="list-style-type: none"> <li><b>Situational Awareness and Information-Sharing:</b> Develop situation reports and share with stakeholders, including information on the extent and duration of power outages</li> <li><b>Situational Awareness and Information-Sharing:</b> Participate in internal and external situational awareness activities (e.g., state calls, regional calls, federal calls, state leadership briefs, etc.)</li> <li><b>Situational Awareness and Information-Sharing:</b> Coordinate response actions and implementation with other states in the impacted region as conditions warrant</li> <li><b>Resource Management:</b> Coordinate with industry and state partners to address access issues, including prioritizing road clearing for power restoration, emergency shelters, etc.</li> </ul>

<sup>1</sup> A cyberattack that results in a physical consequence (i.e., a no-notice power outage) would likely immediately be categorized as a Major Event. Depending on the event and scale, traditional communications may not be available. ESF-12 officials should review the state's cyber incident response plan and know the state and utility partners' back-up communication methods. The matrices should be updated to reflect duties for no-notice events.

# Liquid Fuels Shortage Risk Rubric

STATE/REGIONAL LIQUIDS FUELS RISK RUBRIC					
	GASOLINE	ULSD	JET FUEL	KEROSENE	PROPANE
<b>A. NEW ENGLAND INVENTORIES as of 11/18/22</b>					
Inventories (mn bbls)	3.156	3.802	8.414*	0.039**	0.711
5-Year Average (mn bbls)	4.226	8.645	8.909*	0.301**	0.613
% Difference vs. 5-yr Avg.	-25%	-56%	-6%	-87%	+16%
Severity Points	2	3	0	3	0
<b>B. PRICING – LOCAL PREMIUM VS. BENCHMARK (\$/gallon) as of 11/22/22</b>					
Local Rack Price	2.674 (Boston)	3.784 (Boston)	3.536 (NYH)	3.558 (NYH)***	1.133 (Selkirk)
Benchmark	2.437 (NYMEX)	3.375 (NYMEX)	2.929 (Gulf Coast)	2.931 (Gulf Coast)***	0.838 (Mt. Belvieu)
Difference	0.237	0.409	0.607	0.626	0.295
Severity Points	1	2	2	2	0
<b>C. FUEL AVAILABILITY</b>					
Status	No issues	No issues	No issues	Spot outages; widespread allocation	No issues
Severity Points	0	0	0	2	0
<b>D. KEY INFRASTRUCTURE STATUS</b>					
Fuels Infrastructure					
Terminals	No issues				
New England Ports	No issues				
Irving Oil St. John Refinery	No issues				
New York Harbor	No issues				
Railways	Potential Strike (Ethanol)				Potential Strike
Roadways	No issues				
Interdependent Infrastructure					
Algonquin Pipeline	No issues				
M&N Pipeline	No issues				
Everett LNG	No issues				
ISO-New England	No issues				
Severity Points	1	0	0	0	1
<b>SEVERITY INDEX (A + B + C + D)</b>					
Total Severity Points	4	5	2	8	0
Severity Level	Tier 3: Enhanced Watch	Tier 3: Enhanced Watch	Normal	Tier 2: Significant Event	Normal

\*East Coast inventories; \*\*As of August 31, 2022; \*\*\*Kerosene with 400 ppm sulfur limit

## SEVERITY THRESHOLDS AND INDEX SCORING

- For each fuel separately, assess the severity along the four key assessment areas using the following criteria.

Assessment Area	Severity Index	Criteria	Time Element
Inventories	Tier 1	50%+ below 5-year average	For 1+ weeks
	Tier 2	25-49.9% below 5-year average	
	Tier 3	10-24.9% below 5-year average	
Pricing (Gasoline, ULSD, Jet Fuel, Kerosene)	Tier 1	\$1.00/gallon+ above benchmark	For 5+ days
	Tier 2	\$0.25-0.99/gallon+ above benchmark	
	Tier 3	\$0.10-0.24/gallon+ above benchmark	
Pricing (Propane)	Tier 1	\$1.00/gallon+ above benchmark	For 5+ days
	Tier 2	\$0.50-0.99/gallon+ above benchmark	
	Tier 3	\$0.30-0.50/gallon+ above benchmark	
Availability	Tier 1	Widespread Outages	For 1+ weeks
	Tier 2	Spot Outages, Widespread Allocation	
	Tier 3	Spot Allocation	
Infrastructure	Tier 1	Long outage to one or more key assets	For 1+ weeks
	Tier 2	Short outage to one or more key assets	For <1 week
	Tier 3	Allocation or curtailment of customers to one or more key assets	For 1+ weeks
